

Week 3: Modeling & Sketch of Method

Name A

Name B

Page limit: one page.

I. PROJECT TITLE

Provide your project title here.

II. MAIN IDEA

Explain the main idea of your project in *one sentence*. This can be copied from your previous reports, but also feel free to update it if you have refined your idea.

III. PROBLEM FORMULATION

Describe in *one paragraph* the problem you want to solve. I encourage to use equations to describe your problem.

IV. SKETCH OF METHOD

A. *Offline Component*

Describe in *one paragraph* the offline component of your method (for instance, which computes the value function or the policy). Explain why it is suitable for your problem. Discuss the computation complexity.

B. *Online Component*

Describe in *one paragraph* the online component of your method, which will be used for the actual policy execution. Explain why it is suitable for your problem. Discuss why it is necessary or could be helpful in complementing the limitations of the offline part.

V. WORKING EXAMPLE MODELING

A. *Modeling & Simulation*

Describe in *one paragraph* the *model* of the running example system on which you will deploy your method.

B. *Plan for Implementation*

Describe in *one paragraph* how you will implement its simulation and conduct numerical experiments.
